Critter Repellent

ACTIVE INGREDIENTS:

CASTOR OIL 10.0%

OTHER INGREDIENTS: 90%
WATER

Product Overview

Critter-Maxx is the first and only effective FIFRA varmint repellent developed for use with the EZ-FLO line of injection systems. Comprised of a proprietary blend of the US Environmental Protection Agencies “known safe” ingredients, Critter-Maxx will deliver the premium results that are expected from the EZ-FLO brand. You can use Critter-Maxx to repel a wide variety of pests including but not limited to the following: gophers, moles, voles, & deer. Scent based repellent insures a safe and effective barrier for your entire yard.

Critter-Maxx is tank mixable with virtually all EZ-FLO supplement products providing for a one step solution to sustainable landscape care. You can combine Critter-Maxx with Ferti-Maxx fertilizer for feeding and control, or add to Maxx-Insect to provide a complete pest and insect landscape solution. With Critter-Maxx, the flexibility of the Maxx-Products group is now a complete offering of fertility, water, soil, pest, and insect management, all in a simple to use package optimized for the EZ-FLO injection system.

Protect Your Investment

EPA Known Safe Product

Critter-Maxx is non-hazardous and non-toxic to humans and pets as well as the pests we aim to repel. Being a “known Safe” repellent, you can comfortably apply to a wide variety of applications without concerns of exposure or contamination. Currently, Critter-Maxx is being used in homes, parks, schools, and cities across the globe.

As is true for all EZ-FLO products, our strength is our simplicity and the quality of every product we bring to market. Critter-Maxx was tested for 3 years prior to its release in 2004 in our continued effort to maintain our commitment to the quality provided at every level. If you have any questions about Critter-Maxx or its use, please contact your local EZ-FLO representative or factory:

Application and use rates on back

Application & Use

Directions For Use

EZ-FLO Mainline Systems

The EZ-FLO mainline system is the most effective and efficient method of applying the product since it will micro dose the landscape daily. 12 ounces per 1000 sqft per month is the initial application rate to establish a strong barrier scent in the soil and landscape. Generally it is best to use the #2 or Fast setting to maximize product concentration. Subsequent applications may be applied at 1.5 to 3 ounces per 1000 sqft per month and may be applied alone or mixed with a fertilizer to maintain the barrier.

Typically it is not required to adjust your watering practices to improve the result of any EZ-FLO product. With Critter-Maxx, the frequency of applications to be the most effective against repelling critters for the long term.

Directions For Spray Applications

Hose End Feeder - Landscape

Fill the tank with product and adjust the setting to 4 oz per gallon (EZ-FLO Fast Setting). Move quickly across the area applying at a rate of approximately 12 oz per 1000 sqft. The hose end feeder bottle (32oz) should treat up to 3000 sqft. on initial application rate.

Subsequent applications may be applied at the lower rate of 1.5 to 3 ounces per 1000 sqft and the setting or jug quantity may be reduced accordingly.

Apply as needed based on results, heavy rain will increase the frequency of application.

Pump Sprayers and Spray Rigs

Add Critter-Maxx to the tank at a rate of 12 oz per gallon of water. Each gallon of water will treat up to 1000 sqft.

As a general application rule, do not exceed 16 ounces per gallon of water. Applying at concentrations higher than recommended may not improve performance. Frequency of application has been shown to improve the repellent characteristics of the product.

Additional application instructions, labels, and SDS available at www.ezfloinjection.com

Maxx-Insect + Critter-Maxx

Critter-Maxx has been a trusted staple of the EZ-FLO product line for over 15 years and proven to be an effective and economical solution to repelling landscape pests. While this has been limited to moles, voles, gophers and deer, Maxx-Insect now provides the added power to effectively repel rabbits and many other species. Concentrated garlic is key and only Maxx-Insect has the EZ-FLO compatible version available in the market today. The scent is strong from the container but quickly dissipates once applied while still effectively repelling the nuisance pests. If you do not have mole, vole, or gopher problems, feel free to use Maxx-Insect as a standalone deterrent against rabbits and insects. Application methods and rate do not change, just be sure to have the product applied to the affected area of the plant.
