 WATER

Product Overview

Maxx-Insect is the first and only effective FIFRA insect and pest repellent developed for use with the EZ-FLO line of injection systems. Comprised of a proprietary blend of the US Environmental Protection Agencies “known safe” ingredients and optimized with exclusive surfactant technology, Maxx-Insect will deliver the premium results that are expected from the EZ-FLO brand. You can use Maxx-Insect to control a wide variety of insects including but not limited to the following: mosquitoes, fleas, ticks, ants, aphids, spiders, and flying insects. Contact based control combined with repellent insures a safe and effective barrier for your entire yard.

4X STRONGER

Actual Results

The grass to the right was treated with Maxx-Insect and Ferti-Maxx fertilizer to provide a one step solution to ant damage.

Within 7 days the ant activity had dissipated and the turf began to self repair.

DAY 1

DAY 7

Maxx-Insect is tank mixable with virtually all EZ-FLO supplement products providing for a one step solution to sustainable landscape care. You can combine Maxx-Insect with Ferti-Maxx fertilizer for feeding and control, or add to Critter-Maxx to provide a complete pest and insect landscape solution. With Maxx-Insect, the flexibility of the Maxx-Products group is now a complete offering of fertility, water, soil, pest, and insect management, all in a simple to use package optimized for the EZ-FLO injection system.

As is true for all EZ-FLO products, our strength is our simplicity and the quality of every product we bring to market. Maxx-Insect was tested for 5 years prior to its release in our continued effort to maintain our commitment to the quality provided at every level. If you have any questions about Maxx-Insect or its use, please contact your local EZ-FLO representative or factory:

Application & Use

Directions For Use

EZ-FLO Mainline Systems

The EZ-FLO mainline system is the most effective and efficient method of applying the product since it will microdose the landscape daily. 1 ounce per 1000 sqft per month treats most issues using the slow setting. For heavy control or infestations, add up to 4 times the normal amount and use the slow setting.

Typically it is not required to adjust your watering practices to improve the result of any EZ-FLO product. With Maxx-Insect, you will find applications just before nightfall to be the most effective against repelling flying insects such as Mosquitoes.

Directions For Spray Applications

Hose End Feeder - Landscape

Fill the tank with product and set the setting to 1 oz per gallon (EZ-FLO Fast Setting). Move quickly across the area applying at a rate of approximately 4 oz per 1000 sqft. The hose end feeder bottle (32oz) should treat up to 8000 sqft.

If you desire to apply the product slower or with more water, you may add 8 oz to the sprayer tank and apply at the 1 oz per gallon rate. The product is now diluted to 1/4th strength allowing for only 2000 sqft of coverage from the 32 oz bottle.

Apply as needed based on results, heavy rain will increase the frequency of application.

Pump Sprayers and Spray Rigs

Add Maxx-Insect to the tank at a rate of 4 oz per gallon of water. Each gallon of water will treat up to 1000 sqft.

As a general application rule, do not exceed 8 ounces per gallon of water. Applying at concentrations higher than recommended may not improve performance. Frequency of application has been shown to improve the repellent characteristics of the product.

Additional application instructions, labels, and SDS available at www.ezfloinjection.com

Maxx-Insect + Critter-Maxx

Critter-Maxx has been a trusted staple of the EZ-FLO product line for over 15 years and proven to be an effective and economical solution to repelling landscape pests. While this has been limited to moles, voles, gophers and deer, Maxx-Insect now provides the added power to effectively repel rabbits and many other species. Concentrated garlic is key and only Maxx-Insect has the EZ-FLO compatible version available in the market today. The scent is strong from the container but quickly dissipates once applied while still effectively repelling the nuisance pests. If you do not have mole, vole, or gopher problems, feel free to use Maxx-Insect as a standalone deterrent against rabbits and insects. Application methods and rate do not change, just be sure to have the product applied to the affected area of the plant.
